EuroGEOSS Conference: Advances in cross-domain interoperability – now and beyond

The challenge for addressing issues such as climate change, food security or ecosystem sustainability is that they require multi-disciplinary collaboration and the ability to integrate information across scientific domains.

The Conference focuses on multi-disciplinary interoperability.

The project started with work within the three disciplines of biodiversity, drought and forestry, expanding interoperability within each area. This evolved into a brokering service that fostered interdisciplinary interoperability among the three areas.

The Conference aim is to put EuroGEOSS developments in a broader context including INSPIRE, GEOSS in Europe projects and GMES. The dialogue will also provide attendees with perspectives on incorporating the EuroGEOSS developments into their own projects.

The Conference will offer invited speakers and contributed papers. For more information, refer to the website: <http://www.eurogeoss2012.eu> or contact: info@eurogeoss2012.eu

VENUE:
Centro de Ciencias Humanas y
Sociales (CCHS).
Consejo Superior de
Investigaciones Científicas (CSIC).
