

- **The second EuroGEOSS conference, “Crossdomain integration for improved decision-making in a global context”, to be held in Africa in 2011,** will be for the global community to address the opportunities offered by the EuroGEOSS outcomes for integration across its the three domains and possible directions for collaborative globalization of the efforts.
- This conference will bring together experts from Europe and Africa to examine applications of advanced information systems to issues in the three core EuroGEOSS areas of forestry, drought and biodiversity. The conference will also consider the accessibility and interoperability of spatial data needed for environmental policy making and monitoring by looking at the interoperability between these disciplines.

- **Presentations from African specialists are invited.** An announcement for the 2011 conference is planned for fourth quarter 2010.
